1 What's New

The following enhancements are added to the Migration Portal for this release:

- We are thrilled to unveil our renewed brand identity, which has a lighter look and feel.

The screenshot shows the EDB migration portal interface. At the top, there is a navigation bar with 'EDB migration portal', 'Projects' (selected), and 'Portal Wiki'. A user profile 'JD John Doe' is in the top right. The main area shows a list of projects on the left and a detailed view of the 'Marketing' project on the right. The 'Marketing' project details include its name, interface (JDBC), source DB (Oracle 11g), target DB (EDB Postgres Advanced Server 12), and compatibility (93%). Below this, the 'Schemas' section lists several object types with their counts and migration progress bars. For example, 'GLOBAL_OBJECTS' has 3 objects with 100% completion, 'MARKETING_APPS' has 632 objects with 99% completion, 'TEAMS' has 20 objects with 0% completion, and 'RESOURCES' has 26 objects with 0% completion. Each bar shows the count of failed, repaired, and passed objects.

- Improvements are made to the UI and the data migration assessment report. The improvements repair a merge/split issue reported in the PDF report format.

Repair Handler

Updated Repair Handlers

The following repair handlers have been updated. Repair handlers convert Oracle syntax to Postgres-compatible syntax without manual intervention.

- **ERH 1001 - REGEXP_LIKE_SYNTAX_ERROR**

With this update, the repair handler fixes PL/SQL objects along with storage objects.

- **ERH 2037- TIMESTAMP_WITH_LOCAL_TIMEZONE_DATATYPE**

Previously, the repair handler only fixed the TABLE object; now, the fix is applied to all objects.

2 Supported Versions

The Migration Portal supports assessment and migration from Oracle 11g and 12c to EDB Postgres Advanced Server 10, 11, or 12. Migration Portal is supported on the following browsers and operating systems:

Supported Browsers

For the best user experience, we recommend using the Google Chrome browser. Migration Portal is also supported on the following browsers:

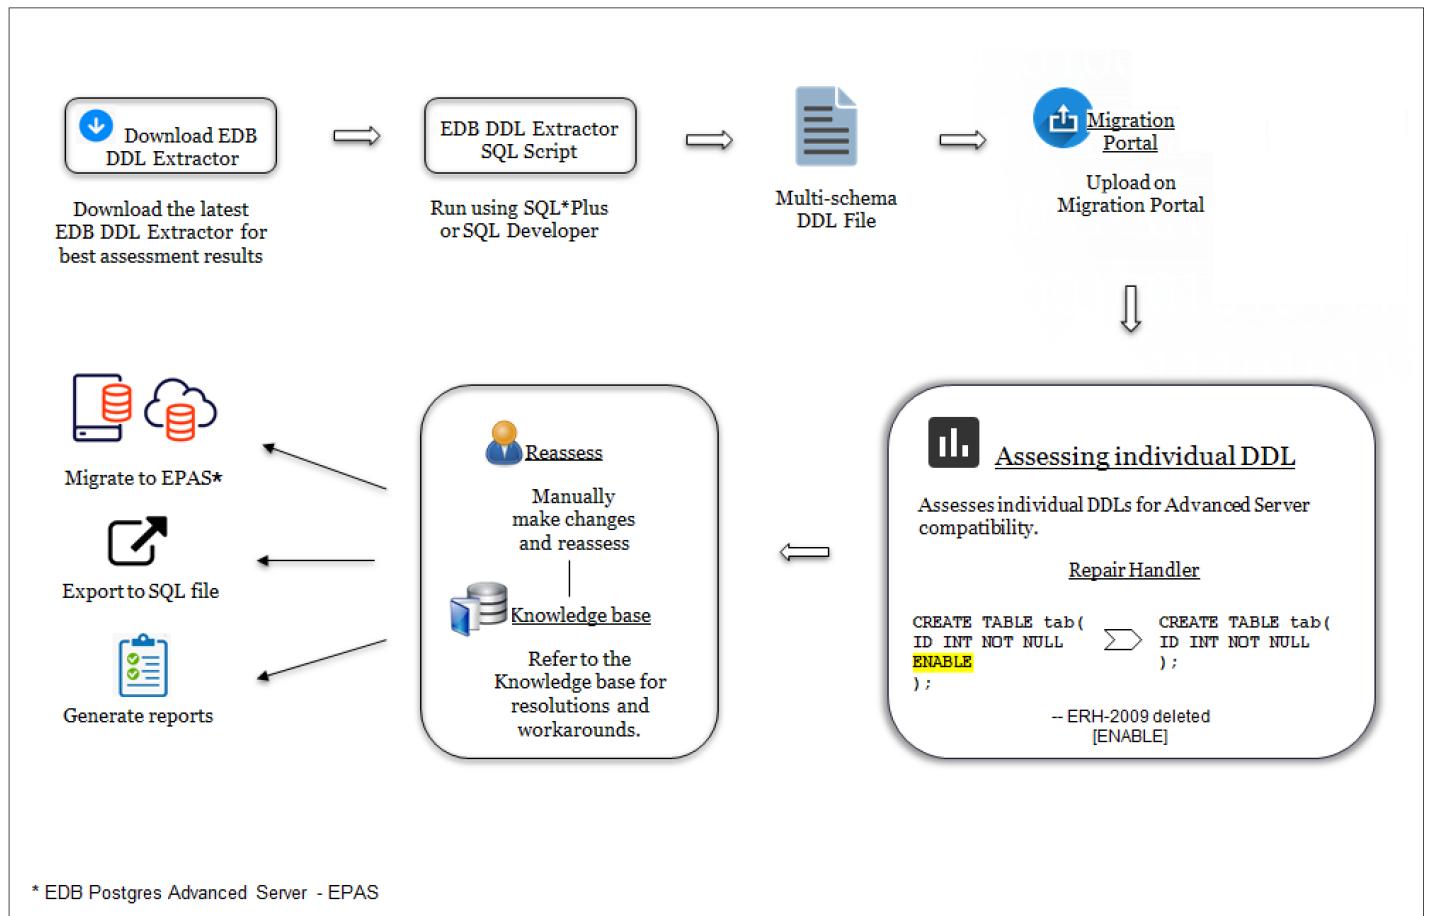

Browser	Supported Version
Apple Safari on Macintosh OS	11 and above
Google Chrome	68 and above
Microsoft Edge	42 and above
Mozilla Firefox	60 and above

Supported Operating Systems

Operating Systems	Supported Version
Macintosh	OS X Sierra
Windows	10
Linux	CentOS 7

3 Using Migration Portal

Migration Portal allows you to easily migrate your database schema from Oracle to EDB Postgres Advanced Server. You can upload schemas for assessment and get immediate feedback and suggestions. The portal allows you to download assessed DDLs for all objects and create your EDB Postgres database on-premises or in the cloud.

To access the Migration Portal:

1. Open a browser and navigate to <https://www.edbpostgres.com/>
2. On the EnterpriseDB home page, click **Products > Migration Portal**.

1. Click **Open Migration Portal**.

2. Log in using your credentials.

3.1 Overview of the Migration Portal Home Page

The Migration Portal home page provides quick access to migration tools.

The screenshot shows the EDB Migration Portal interface. On the left, the 'Projects' panel lists 297 projects, each with a progress bar, name, date, and source/target details. In the center, the 'Overview' panel for a selected project displays compatibility details (Interface: ODBC, Source DB: Oracle 11g, Target DB: EDB Postgres Advanced Server 10, Compatibility: 68%), actions (Migrate to..., Report, Delete), and a warning message about migration challenges. The 'Schemas' panel shows schema assessment results for HR, MIGRATIONTEST, and schema_1900, with progress bars indicating failed, repaired, and passed objects. On the right, the 'Quick help' sidebar provides links to Getting Started, Quick Start guide, Migration Portal guide, and EDB DDL Extractor.

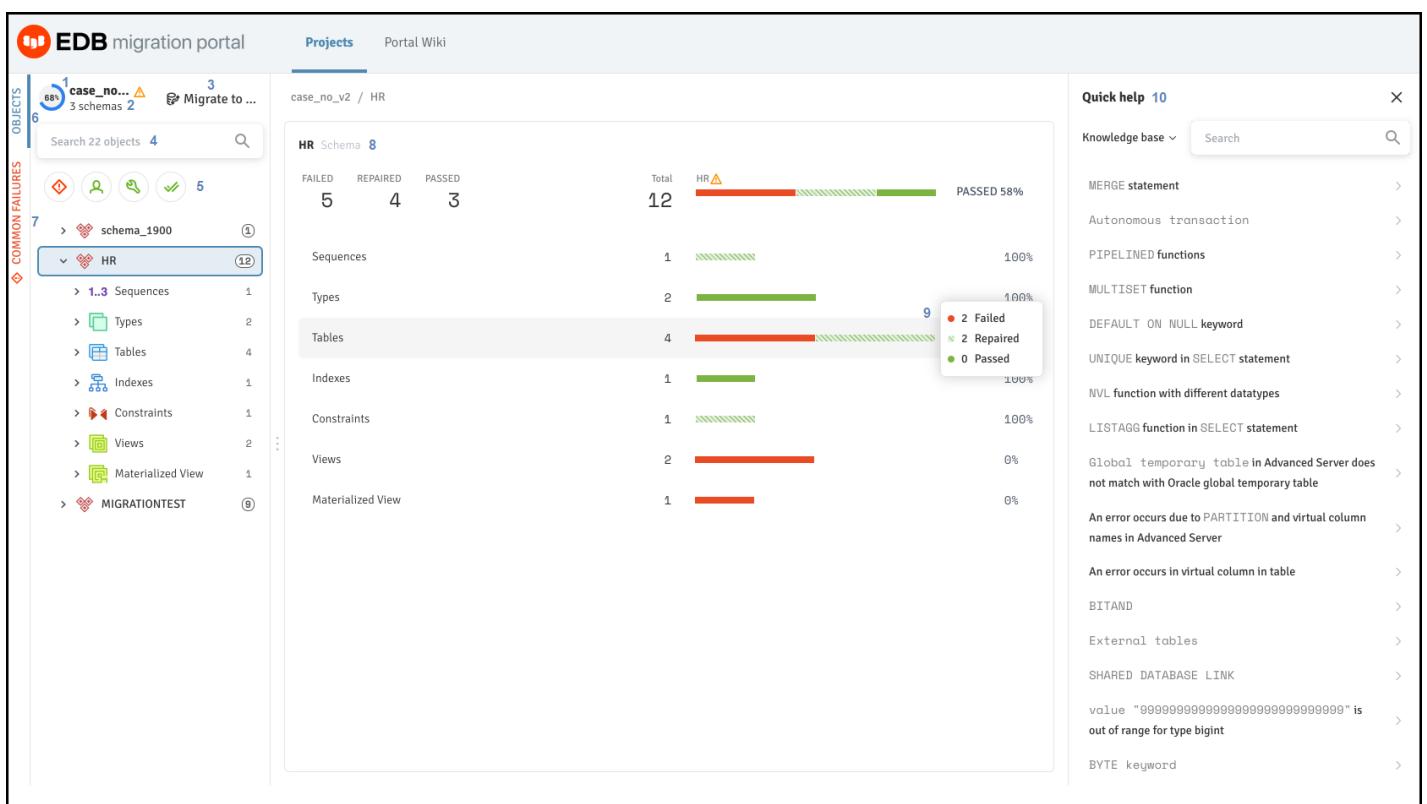

The Migration Portal home page allows access to the following Migration Portal features:

- Projects:** The **Projects** panel displays a list of assessed projects.
- Create project:** Click **+ New** (the button located to the right of the **Projects** label) to create a new project.
- Search Projects:** Use the **Search** box to search for projects.
- Overview:** The **Overview** panel provides details about the selected project and displays the compatibility percentage after schema assessment.
- Migrate:** Use the **Migrate** button to either download an EDB Postgres Advanced Server compatible **.sql** file or to migrate a schema to an EDB Postgres Advanced Server on-premise or on cloud. For more information, see **Schema Migration <mp_schema_migration>**.
- Report:** Use the **Report** button to view and download the schema assessment report.
- Delete:** Use the **Delete** button to delete a selected project.
- Warning sign:** A warning message is displayed if a project or a schema is less than 70% compatible or any DDL doesn't succeed after multiple attempts.

9. **Upload DDL file:** Use the [Upload new schema](#) button to upload a new or additional DDL file.
10. **Schemas:** The [Schemas](#) panel displays the assessment result from an uploaded DDL file.
11. **Quick help:** The [Quick help](#) panel contains all the help guides.
12. **Portal Wiki:** The [Portal Wiki](#) has links to product information and different help guides.

3.2 Overview of the Migration Portal Projects Page

The Migration Portal Projects page provides detailed information about your migration.

Use the following resources to gather information about your migration projects:

1. **Compatible:** The [Compatible](#) gauge displays the color on the basis of the compatibility percentage of the assessed schema.
2. **Schema Count:** Displays the number of schemas in a project.
3. **Migrate to:** Use the [Migrate to](#) to migrate the schema to an *EDB Postgres Advanced Server* on-premise or on cloud.
4. **Search objects:** Use the [Search](#) box to search for objects.

5. **Filters:** You can filter the system repaired and manual repaired objects from the left panel of the Projects page. In addition, you can select one or more filter combinations to refine the information.
6. **Objects:** Displays the objects for the selected schemas.
7. **Common Failures:** Displays the reason for the failed objects for the selected schemas.

The screenshot shows the EDB migration portal interface. The top navigation bar includes 'Projects', 'Admin', 'Dashboard', and 'Portal Wiki'. The main content area is titled 'case_no_v2 / HR'. On the left, there's a sidebar with 'OBJECTS' and 'COMMON FAILURES' sections. The 'COMMON FAILURES' section is active, showing a tree view of failed objects under the 'HR Schema'. One node, 'HR', is expanded, revealing five specific failure entries. Each entry includes a tooltip indicating the count of objects affected (e.g., 2, 1, 1, 1, 1) and the reason for failure. A 'CSV' download button is located at the top of the failures panel. The overall theme is light blue and white.

Note

You can download a [CSV](#) file for the common failures for the project.

8. **Schema:** The [Schema](#) panel displays the result of the assessment.
9. **Tooltip:** Hover over a result set to display a tooltip with the number of passed, failed, and repaired objects.
10. **Quick help:** The [Quick help](#) panel displays links to Knowledge base articles and repair handler documentation.
11. **Search:** Use the [Search](#) box to search the [Knowledge base](#) entries or repair handler documentation for specific information.

The screenshot shows the EDB migration portal interface. On the left, there's a sidebar with 'OBJECTS' and 'COMMON FAILURES' sections. The main area displays a comparison between 'Source' and 'Target' database structures for an index named 'DEPT_LOCATION_IX'. The 'Source' section shows the original DDL: 'CREATE INDEX HR.DEPT_LOCATION_IX ON HR.DEPARTMENTS (LOCATION_ID)'. The 'Target' section shows the same DDL. Below these, tabs for 'OUTPUT' and 'REPAIRED' show a single entry: 'Success'. A 'Quick help' panel on the right has a search bar containing 'Merg'.

3.3 Overview of the Migration Portal Wiki Page

The Portal Wiki page provides quick access to information:

- What's New information
- Quick Start guide
- Migrating Schema
- Migrating Data
- DDL Extractor guide
- Knowledge Base
- Repair handlers
- Migration Portal User's Guide
- FAQs

The screenshot shows the EDB migration portal's 'Portal Wiki' section. On the left sidebar, there's a 'What's new' list with a blue-bordered box around 'Version 2.9.0 (19-Aug-2020)'. The main content area has a heading 'What's New' and a sub-section 'Version 2.9.0 (19-Aug-2020)' which contains a heading 'Schema Migration to EDB Postgres Advanced Server' and some text about it. Below that is a list of migration options. At the bottom, there's a diagram titled 'Migrate schemas to' with three options: 'Existing on-premise EDB Postgres Advanced Server' (gray), 'New on-premise EDB Postgres Advanced Server Installation' (orange, highlighted with a red border), and 'EDB Postgres Advanced Server on Cloud' (gray).

4 Migrating a Database

To migrate a database, you must complete the following steps:

1. Perform a Schema Extraction <mp_schema_extraction>.
2. Perform a Schema Assessment <mp_schema_assessment>.
3. Perform a Schema Migration <mp_schema_migration>.
4. Perform a Data Migration <mp_data_migration>.

The following sections provide detailed information about each step in the migration process.

4.1 Performing a Schema Extraction

Prerequisites

Before extracting a schema, you must download the latest EDB DDL Extractor script from the Migration Portal [Projects](#) page or from the link provided in the DDL Extractor guide in the Portal Wiki. The script can be run in SQL Developer or SQL*Plus. It uses Oracle's [DBMS_METADATA](#) built-in package to extract DDLs for different objects under schemas (specified while running the script). The EDB DDL extractor creates the DDL file that will be uploaded to the portal and analyzed for EDB Postgres compatibility.

Note

The *script user* must have [CONNECT](#), [RESOURCE](#) and [SELECT_CATALOG_ROLE](#) roles.

For SQL*Plus

1. Connect to SQL*Plus and run the command:

```
SQL>@edb_ddl_extractor.sql
```

2. Provide the schema name and the path or directory in which the extractor will store the extracted DDL. When extracting multiple schemas, use a comma (',') as a delimiter.

Note

If you want to extract all the user schemas from the current database, do not mention any schema names while extracting. However, it is recommended to mention the schema names that you would like to extract.

1. If you want to extract dependent objects from other schemas, enter [yes](#) or [no](#).

For example, on Linux:

```
Enter a comma separated list of schemas to be extracted (Default all schemas): HR, SCOTT, FINANCE Location for output file (Default current location) : /home/oracle/extracted_ddls/
```

WARNING:

```
Given schema(s) list may contain objects which are dependent on objects from other schema(s), not mentioned in the list. Assessment may fail for such objects. It is suggested to extract all dependent objects together.
```

```
Extract dependent object from other schemas?(yes/no) (Default no / Ignored for all schemas option): yes
```

On Windows:

```
Enter comma separated list of schemas to be extracted (Default all schemas): HR, SCOTT, FINANCE Location for output file (Default current location) :
```

c:\Users\Example\Desktop\

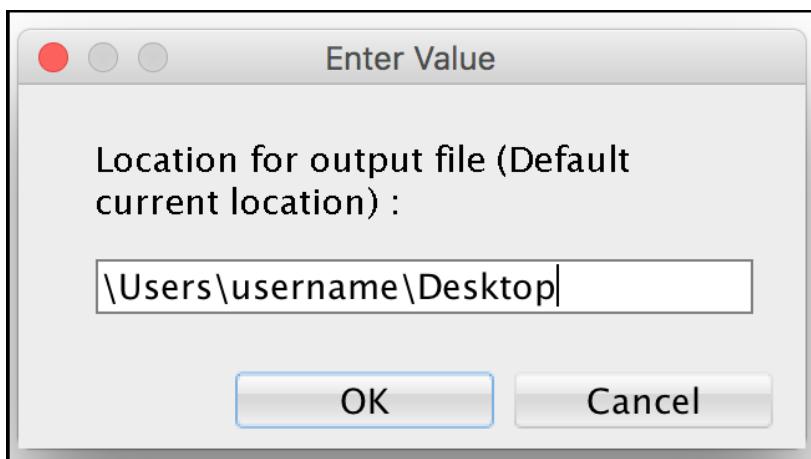

WARNING:

Given schema(s) list may contain objects which are dependent on objects from other schema(s), not mentioned in the list. Assessment may fail for such objects. It is suggested to extract all dependent objects together.

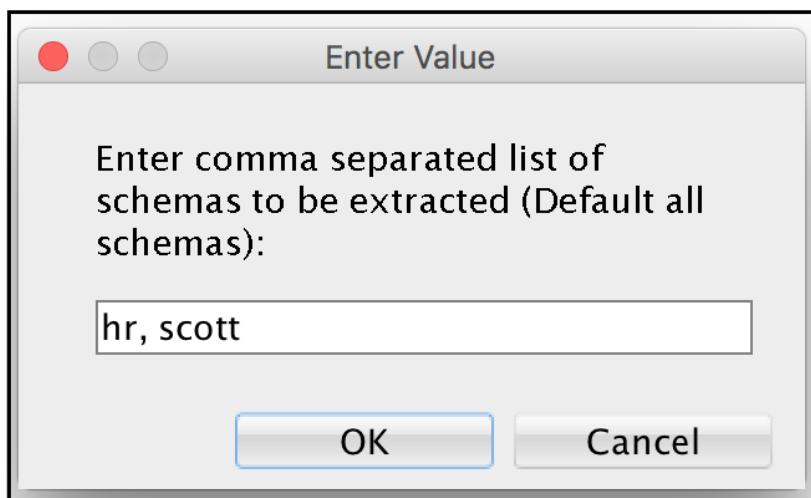

Extract dependent object from other schemas?(yes/no) (Default no / Ignored for all schemas option): yes

For SQL Developer

1. Connect to the SQL server and run the following command:

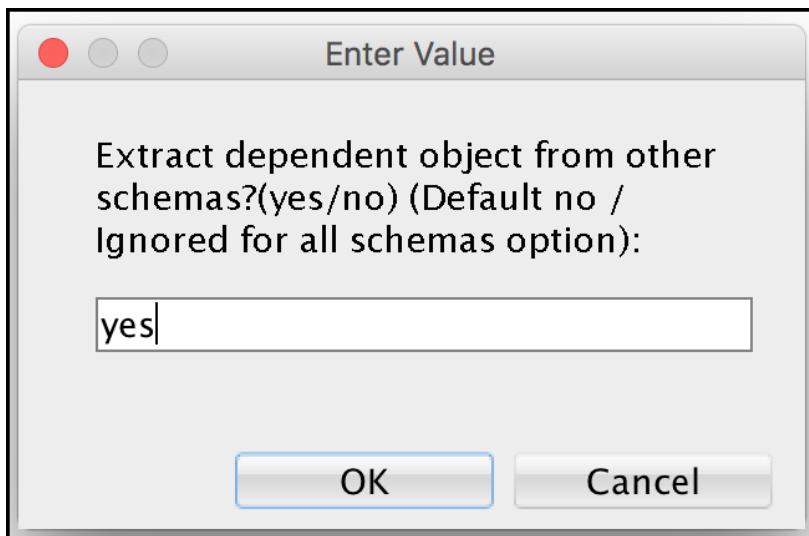

1. Enter a comma-separated list of schemas:

1. Enter the file path for the output file:

1. Enter (yes/no) to extract dependant objects:

Note: You can also enter single schema name in both SQL*Plus and SQL Developer.

The script then iterates through the object types in the source database and once the task is completed, the .SQL output is stored at the entered location, i.e.,
c:\\Users\\Example\\Desktop\\.

Additional Notes

- The EDB DDL Extractor script does not extract objects that were restored using Flashback and still have names like BIN\$b54+4XIEYwPgUAB/AQBWwA==\$0. If you want to extract these objects, you must change the name of the objects and re-run the extraction process.
- DDL Extractor extracts nologging tables as normal tables. Once these tables are migrated to EDB Postgres Advanced Server, WAL log files will be created.

Supported Object Types

The Migration Portal supports the migration of the following object types:

- Synonyms
- DB Links
- Types and Type Body
- Sequences
- Tables
- Constraints
- Indexes (Except LOB indexes and indexes on materialized views)
- Views
- Materialized Views
- Triggers
- Functions
- Procedures
- Packages

Note

COMMENTS on Columns, Tables, and Materialized Views are also supported.

Unsupported Object Types

- Editions
- Operators
- Schedulers
- LOB indexes and Indexes on Materialized Views
- XML Schemas
- Profiles
- Role and Object Grants
- Tablespaces
- Directories
- Users
- RLS Policy
- Queues

Oracle System Schemas

EDB DDL Extractor script will ignore the following system schemas while extracting from Oracle:

ANONYMOUS	APEX_PUBLIC_USER	APEX_030200
APEX_040000	APEX_040000	APPQOSSYS
AUDSYS	BI	CTXSYS
DMSYS	DBSNMP	DIP

DVF	DVSYS	EXFSYS
FLOWS_FILES	FLOWS_020100	GSMADMIN_INTERNAL
GSMCATUSER	GSMUSER	IX
LBACSYS	MDDATA	MDSYS
MGMT_VIEW	OE	OJVMSYS
OLAPSYS	ORDPLUGINS	ORDSYS
ORDDATA	OUTLN	ORACLE_OCM
OWBSYS	OWBYSS_AUDIT	PM
RMAN	SH	SI_INFORMTN_SCHEMA
SPATIAL_CSW_ADMIN_USR	SPATIAL_WFS_ADMIN_USR	SYS
SYSBACKUP	SYSDG	SYSKM
SYSTEM SYSMAN	TSMSYS WKPROXY	WKSYS
WK_TEST XS\$NULL	WMSYS	XDB

4.2 Performing a Schema Assessment

To assess an Oracle database schema for compatibility with EDB Postgres Advanced Server, you must:

1. Navigate to the [Migration Portal](#).
2. Enter your EDB credentials.
3. Click the **CREATE PROJECT** icon to create a new project.

New project

Project name
e.g. First project

Application interface
 JDBC ODBC .NET OCI ProC Other

Source DB
Oracle

Version
11g

Target DB
EDB Postgres Advanced Server

Version
12

DDL file [\(How to get a DDL file?\)](#)

No file chosen

Add Index Prefix
Index objects will be prefixed with “idx” as unique names are required for tables and indexes.

Description(Optional)
Say something about the project...
200 characters left

1. On the New project dialog, enter the project name in the Project name field.

2. Specify project details:

- Select the radio button next to the **Application interface**.
- Select a **Source DB** and **Version** for the source.
- Select the **Target DB** and **Version** for the target.

3. Click **Choose file** to upload the .SQL file generated by the latest EDB DDL Extractor for Oracle Database.

Note:

- You should not modify the .SQL file.
- Only the .SQL file generated by the latest EDB DDL Extractor can be uploaded.

For more information, refer to the **Schema Extraction <mp_schema_extraction>** section.

4. Check the box next to **Add Index Prefix** to specify an index prefix (**idx**) when creating a project to ensure better assessment results, as EDB Postgres Advanced Server does not support the same name for tables and indexes.

5. Click **Create & assess** to create a new project and to assess the schemas.

The screenshot shows the EDB migration portal's 'Projects' page. On the left, a sidebar lists 297 projects, each with a progress bar and a brief description. The main area features two sections: 'Overview' and 'Schemas'. The 'Overview' section for project 'case_no_v2' shows an interface of ODBC, a source DB of Oracle 11g, and a target DB of EDB Postgres Advanced Server 10, with a compatibility score of 68%. The 'Schemas' section shows analysis results for three schemas: 'HR' (12 objects), 'MIGRATIONTEST' (9 objects), and 'schema_1900' (1 object). Each schema has a progress bar indicating the status of failed, repaired, and passed migrations. A tooltip for the 'case_no_v2' project states: 'This project has migration challenges. Contact us for help.'

The analysis tool will review every construct and execute repair actions to improve compatibility with EDB Postgres Advanced Server, and flag any remaining errors that require manual intervention.

1. Verify the DDL objects (e.g., TABLES) that do not show a 100% success ratio.

1. Click the objects that are not compatible with EDB Postgres Advanced Server and view the details. At the bottom of the middle panel, you can view repair action details.

1. Refer to the Knowledge Base information in the right panel to locate the possible workarounds for the objects that are not immediately compatible with EDB Postgres Advanced Server. You can also view the Knowledge Base information on the Portal Wiki page.

case_no_v2 / HR

HR Schema

FAILED	REPAIRED	PASSED
5	4	3

Total: 12 PASSED 58%

Sequences: 1 100%
Types: 2 100%
Tables: 4 100%
Indexes: 1 100%
Constraints: 1 100%
Views: 2 0%
Materialized View: 1 0%

Quick help

- Knowledge base > Search
- MERGE statement
- Autonomous transaction
- PIPELINED functions
- MULTISET function
- DEFAULT ON NULL keyword
- UNIQUE keyword in SELECT statement
- NVL function with different datatypes
- LISTAGG function in SELECT statement
- Global temporary table in Advanced Server does not match with Oracle global temporary table
- An error occurs due to PARTITION and virtual column names in Advanced Server
- An error occurs in virtual column in table
- BITAND
- External tables
- SHARED DATABASE LINK
- value "99999999999999999999999999999999" is out of range for type bigint
- BYTE keyword

- On the **Knowledge Base** tab, you can enter the error message for the incompatible objects with EDB Postgres Advanced Server and click **Search**.

The object detail panel displays the workaround or the resolution for the failed object. You can manually make the changes on the **Assessment** tab for that object, and click **Reassess**.

Note: If any failed object passes while reassessing, the dependent objects for that object are also reassessed.

The screenshot shows the EDB migration portal interface. On the left, there's a sidebar titled 'COMMON FAILURES' with icons for objects, users, and more. The main area is titled 'case_no_v2 / HR / Tables / EMPLOYEES'. It shows the DDL for the EMPLOYEES table in both the 'Source' and 'Target' environments. The 'Source' DDL includes constraints like 'CONSTRAINT EMP_LAST_NAME_NN NOT NULL ENABLE'. The 'Target' DDL has these constraints removed. Below the tables, there's an 'OUTPUT' tab labeled 'REPAIRED' with a green 'Success' icon.

Similarly, you can make all the incompatible objects compatible.

Note

If the information or workaround for incompatible objects is not available in the Knowledge Base, please contact the support team for assistance.

When you have finished working with the DDL, you can either download the modified EDB compatible DDL as a .sql file or migrate the schemas see, [Schema Migration](#).

Generating an Assessment Report

Migration Portal's report functionality provides a high-level assessment summary of the schemas assessed for your project. In addition, the report provides details about the failed objects and the cause of failure.

Report

Select schemas

All

schema_1900

HR

MIGRATIONTEST

To generate a report:

1. Click the **Report** button to access the schema selection dialog.
2. Select the schemas that you wish to include in the report.
3. Click **Generate** to generate the onscreen report.

Schema Assessment Report

Generated by: Migration Portal v2.0.0
14th September 2020, 2:50:49 pm

Project: case_no_v2 **Source database:** Oracle 11g **Target database:** EDB Postgres Advanced Server 10

Description: ttt

Summary

This report provides a high-level assessment summary for selected schemas you assessed under "case_no_v2" project. In addition, the report provides details of the failed objects and the cause of failure.

Schemas	Total objects	Passed	Repaired	Failed	Compatibility
HR	12 objects	5	2	5	58%

HR Object type

Object type	Total	Passed	Repaired	Failed
Constraints	1	1	0	0
Indexes	1	1	0	0
Materialized View	1	0	0	1
Sequences	1	0	1	0
Tables	4	1	1	2
Types	2	2	0	0
Views	2	0	0	2

Failed Objects

Schema	Total	Failed
HR	12	5

Common Failures

You can optionally select [Generate PDF](#) to save the report in [.pdf](#) format. You can also view the count of distinct repair handlers applied to the DDLs under the selected schemas.

4.3 Schema Migration

After resolving errors in your schemas, you can use the schemas with a client application such as pgAdmin, ToadEdge, or the PSQL client, or migrate the schema to an EDB Postgres Advanced Server.

Note: For more information about using Toad Edge with EDB Postgres Advanced Server, see Toad Edge for Postgres.

You can choose one of the following options for migrating schemas; migrate to an:

- Existing on-premise EDB Postgres Advanced Server
- New on-premise EDB Postgres Advanced Server
- EDB Postgres Advanced Server on Cloud

Migrate schemas to

Migrating to a New On-Premise EDB Postgres Advanced Server Installation

You can install new EDB Postgres Advanced Server on-premise on Windows or Linux platforms and migrate the schemas.

Migrating Schemas on Windows

To migrate schemas to a new on-premise EDB Postgres Advanced Server on Windows, complete the following steps:

1. Click **New on-premise EDB Postgres Advanced Server** option.

Migrate schemas to

?

Existing on-premise EDB Postgres Advanced Server

Choose this option to migrate your schemas to an existing on-premise EDB Postgres Advanced Server.

New on-premise EDB Postgres Advanced Server Installation

Choose this option to install a new EDB Postgres Advanced Server and migrate your schemas.

EDB Postgres Advanced Server on Cloud

Choose this option to migrate your schemas on EDB Postgres Advanced Server on Cloud.

The converted schemas are migrated to the target server.

4.4 Data Migration

After performing the schema migration, complete the following steps to migrate data:

1. Use Migration Toolkit to migrate the data. For detailed information about using Migration Toolkit, see the [Migration Toolkit Guide](#).
2. Configure the Migration Toolkit `toolkit.properties` file, ensuring that connection information for the source and target databases is available in the property file:

```
SRC_DB_URL = jdbc:oracle:thin:@localhost:1521:ORCL
SRC_DB_USER = user_name
```

```

SRC_DB_PASSWORD = password
TARGET_DB_URL= jdbc:edb://localhost:5444/migration
TARGET_DB_USER = enterprisedb
TARGET_DB-PASSWORD = password

```

For more information, see [Building the toolkit.properties File](#).

1. Invoke Migration Toolkit in `-dataOnly` mode; include the `-truncLoad` keyword to resolve foreign key dependencies across tables.

For example, the following command migrates data to a schema named `hr`:

```
runMTK.sh -dataOnly -targetSchema hr -truncLoad HR
```

The command migrates the specified source_schema to the `target_schema`. The data is loaded into the locally installed EDB Postgres instance with a database superuser named `enterprisedb` and the password of `password`.

Note: The tables are truncated before attempting the data load.

5 Advanced Data Migration

For larger databases that require a parallel data load, you can use one of the following methods:

- Use the EDB Postgres Advanced Server database link feature (for compatibility with Oracle databases).

Or

- Use a Dblink or a database link style migration (if your data contains `CLOB` data).

For more information, see the [Migration Toolkit Guide](#).
